

The Picnic Set is ideal for two hikers // Simply start cooking and enjoy the alfresco dining experience.

Read more about the Picnic Set on page 108.

You can argue about taste

BUT NOT ABOUT STAINLESS STEEL.

Stainless steel is the number one choice for cooking utensils // The specially hardened stainless steel dishes made by **TATONKA** are robust, rust-free, antibacterial, taste-neutral and easy to clean. Aluminium and titanium are perhaps a little lighter, but they do not have the same properties as stainless steel; aluminium is not abrasion-resistant, it quickly oxidises and can be deformed under intense heat or pressure. Titanium is very expensive and can lose its colour. Plus, the very hard material cannot be formed into more complex forms. Therefore, stainless steel is the best choice.

Stainless steel products do, however, vary considerably in their quality. **TATONKA** cooking utensils are manufactured using high-quality stainless steel SS 304 and set the standard, which is why it is often imitated. Those who want to enjoy their equipment for a longer period of time, without having to worry about rust, will opt for the original.

The **TATONKA** stainless steel series contains everything an outdoor enthusiast could wish for: cups, bottles, plates, bowls, pots, pans and even entire cooking sets – for every use and every taste. Gourmets will go for the double-walled **Thermo Delux** cup, which keeps liquids hot or cold for a longer period of time. Hikers looking to keep weight and pack volume as low as possible will prefer the light and stackable **Expedition Mug**.

Many stainless steel products from **TATONKA** can be perfectly stacked. This allows more room for food and provisions, which is what accounts for the majority of the weight on longer tours.

Having the right provisions is just as important as having the right equipment // If you do not eat or drink sufficiently while on a tour, you won't be functioning at your full capacity. This is why we would like to give you a few tips for your trip.

FOR THOSE WHO DON'T WANT RUST, CHOOSE THE ORIGINAL.

If you are travelling alone, you have to pack approx. 800 grams of concentrated provisions for each day. For a 14-day tour this adds up to over 11 kg. So you should ensure that you take foodstuffs that provide lots of energy but do not weigh very much, such as mashed potatoes, rice, noodles etc. They are not only a component of many frozen dried dishes, but also a great basis for self-made meals.

Also make sure you pay attention to the preparation time. Rice has a cooking time of 20 minutes and requires sufficient fuel, which unfortunately requires a lot of space in your backpack. Therefore, fast-cooking rice is better suited. But the storage life of the product also plays an important role. Foods that do not require cooling are, for example, vegetables and soft cheese. Hard cheese and smoked meat are perhaps non-perishable, but should not be exposed to direct sunlight or left in a heated tent.

And last but not least: prepare your provisions at home, go through all of the planned meals and pack small packages containing the required ingredients – and let the culinary tour commence!

MUGS

Mug S

Mug

Expedition Mug

Handle Mug

Article: 4069 Mug S

Weight: 100 g
Dimensions: 7.5 × 9 cm
Volume: 0.35 l

Article: 4070 Mug
